

Fig. S1

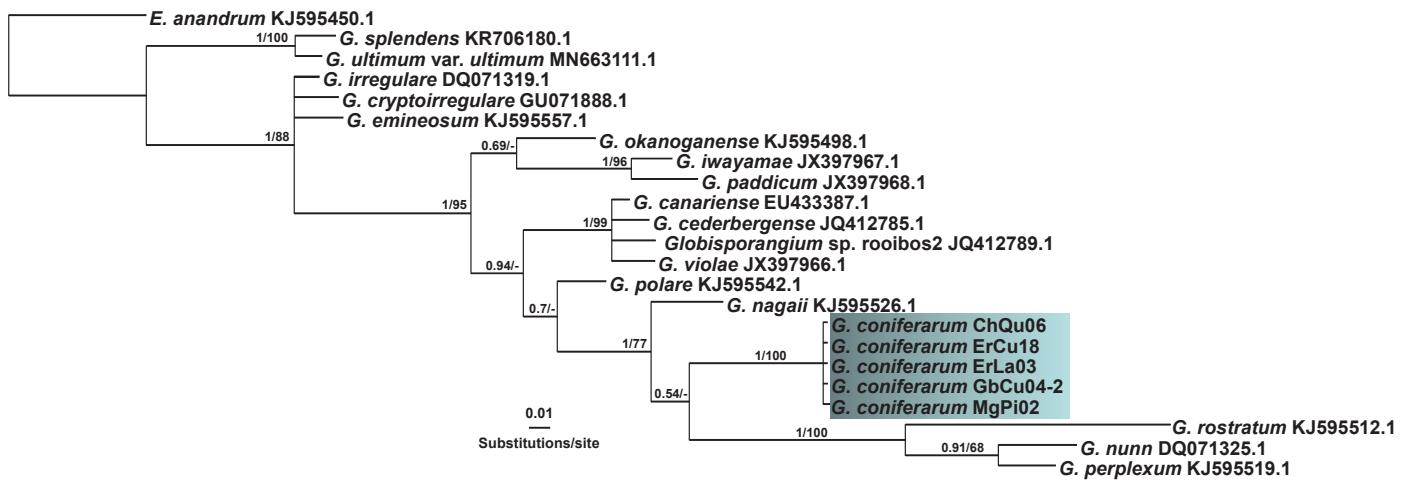

Fig. S1. Phylogenetic relationships of *Globisporangium* spp. from conifers and *Quercus* sp. (Shiraz County, Iran) among 17 *Globisporangium* species based on Bayesian analysis of β tub sequences. Numbers on branches represent posterior probability based on Bayesian analysis and the bootstrap support based on maximum likelihood analysis, respectively.

Fig. S2

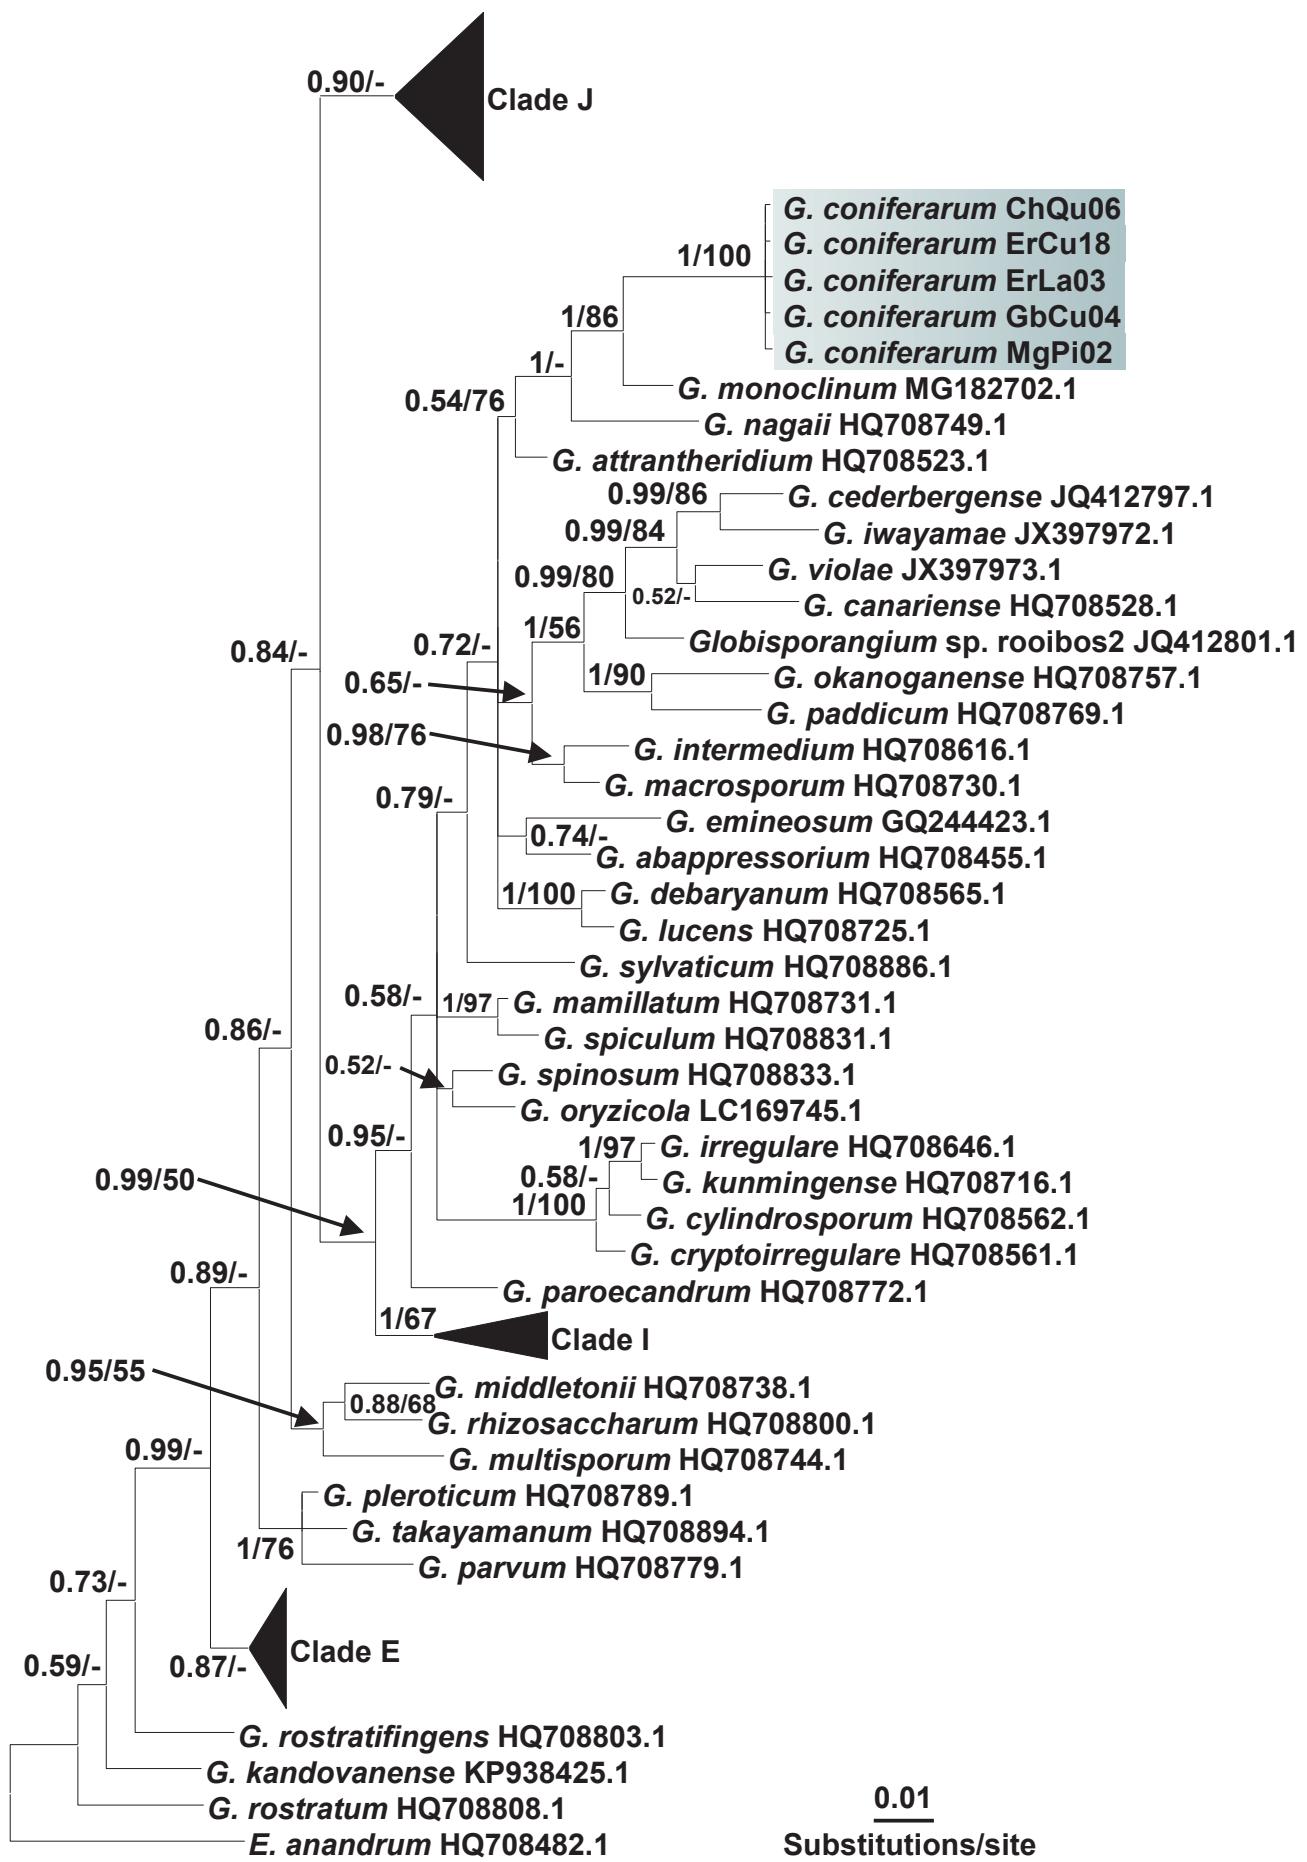

Fig. S2. Phylogenetic relationships of *Globisporangium* spp. from conifers and *Quercus* sp. (Shiraz County, Iran) among 16 *Globisporangium* species based on Bayesian analysis of *cox1* sequences. Numbers on branches represent posterior probability based on Bayesian analysis and the bootstrap support based on maximum likelihood analysis, respectively.

Fig. S3

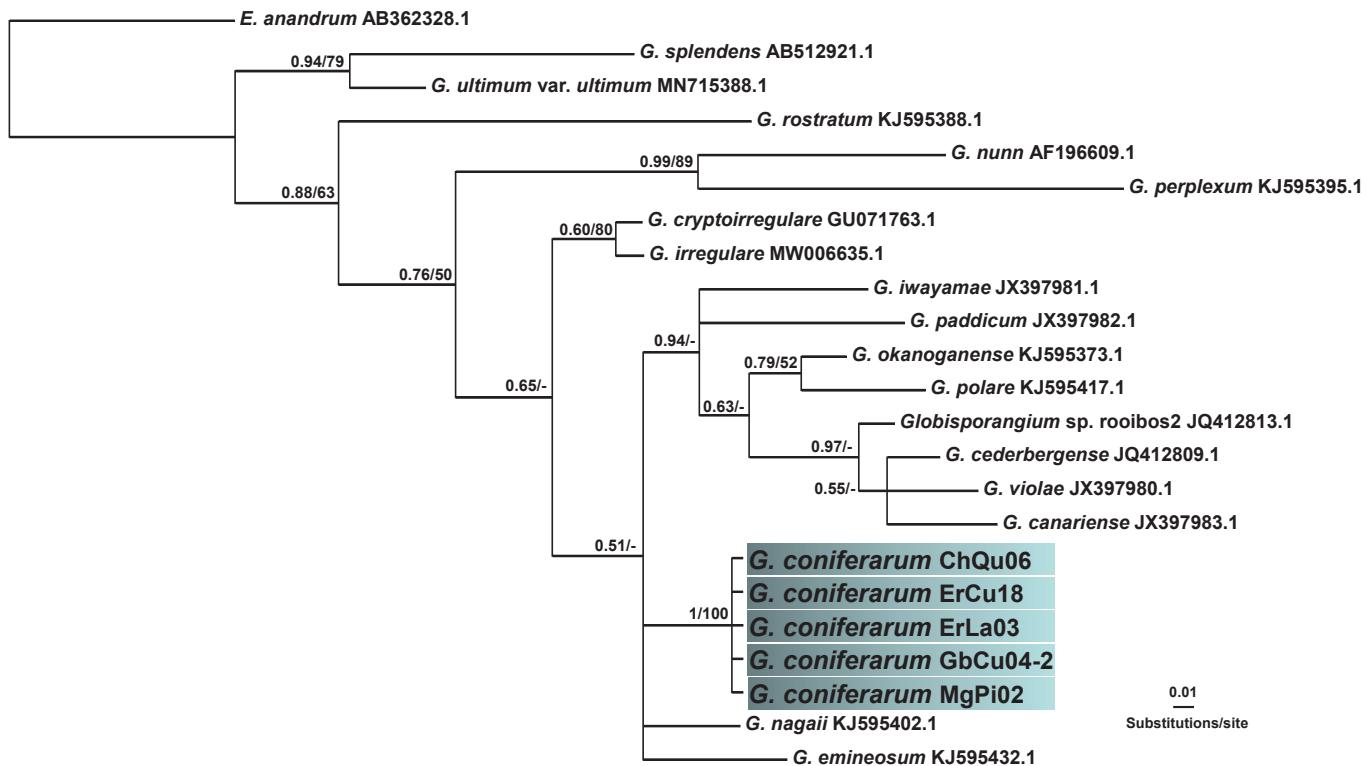

Fig. S3. Phylogenetic relationships of *Globisporangium* spp. from conifers and *Quercus* sp. (Shiraz County, Iran) among 17 *Globisporangium* species based on Bayesian analysis of *cox2* sequences. Numbers on branches represent posterior probability based on Bayesian analysis and the bootstrap support based on maximum likelihood analysis, respectively.

Fig. S4

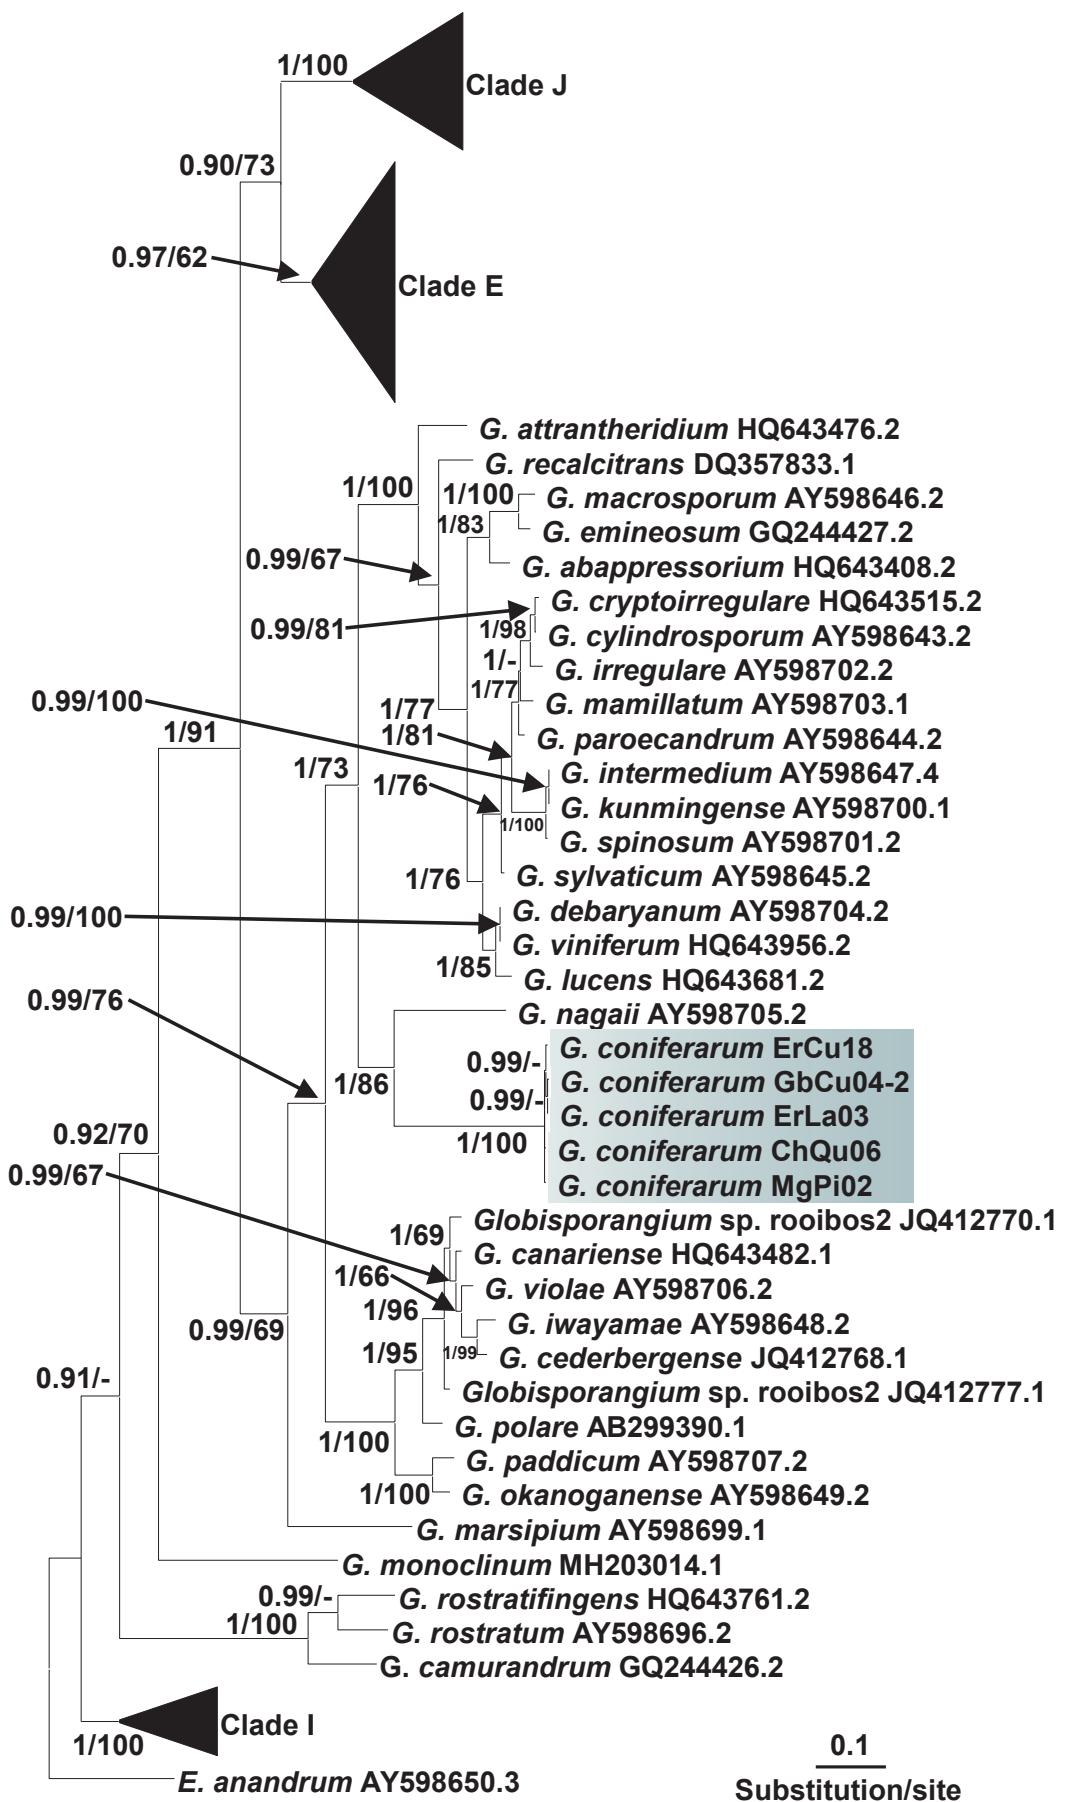

Fig. S4. Phylogenetic relationships of *Globisporangium* spp. from conifers and *Quercus* sp. (Shiraz County, Iran) among 33 *Globisporangium* species based on Bayesian analysis of Internal transcribed spacer (ITS) sequences. Numbers on branches represent posterior probability based on Bayesian analysis and the bootstrap support based on maximum likelihood analysis, respectively. **Table S1.** Information of all the *Globisporangium* isolates used in the phylogenetic analyses, including local, international, and alternative isolate identifications. GenBank accession numbers for sequences obtained in present study are shown in bold.

Table S1

Table S1. List of primers used in this study.

Target DNA	Primer name	Primer sequence (5'→3')	Reference
ITS ^a	ITS4	TCCTCCGTTATTGATATGC	White <i>et al.</i> (1990)
	ITS6	GAAGGTGAAGTCGTAACAAGG	Cooke <i>et al.</i> (2000)
	LRO	GCTTAAGTTCAGCGGGT	Mancalvo <i>et al.</i> (1995)
	DC6	GAGGGACTTTGGGTAATCA	Bonants <i>et al.</i> (1997)
<i>βtub</i> ^b	BT5	GTATCATGTGCACGTACTCGG	Villa <i>et al.</i> (2006)
	BT6	CAAGAAAGCCTTACGACGGA	Villa <i>et al.</i> (2006)
cox1 ^c	OomCox1-Levup	TCAWCWMGATGGCTTTTCAAC	Robideau <i>et al.</i> (2011)
	OomCox1-Levo	CYTCGGRTGWCCRAAAAACCAA	Robideau <i>et al.</i> (2011)
	FM58mod	RRHWACKTGACTDATRATACAAA	Robideau <i>et al.</i> (2011)
cox2 ^d	FM66	TAGGATTTCAGATCCTGC	Villa <i>et al.</i> (2006)
	FM58	CCACAAATTCACTACATTGA	Villa <i>et al.</i> (2006)

^aInternal transcribed spacers 1, 2 and 5.8S gene of rDNA. ^b β-tubulin. ^c cytochrome c oxidase subunit I. ^d cytochrome c oxidase subunit II.

Table S2

Table S2. Polymerase chain reaction conditions for primers used in this study.

Gene	Initial desaturation	Number of cycles	Desaturation	Annealing	Expansion	Final extension
ITS ^a	95 (120) ^e	30	95 (20)	55 (25)	72 (50)	72 (600)
βtub ^b	95 (120)	30	95 (20)	63 (25)	72 (50)	72 (600)
cox1 ^c	95 (120)	35	95 (60)	55 (60)	72 (60)	72 (600)
cox2 ^d	95 (120)	30	95 (20)	52 (25)	72 (50)	72 (600)

^aInternal transcribed spacers 1, 2 and 5.8S gene of rDNA. ^b β-tubulin. ^c cytochrome c oxidase subunit I. ^d cytochrome c oxidase subunit II. ^e Temperature °C (time s').

Table S3

Table S3. Information of all the *Globisporangium* spp. isolates used in the phylogenetic analyses, including local, international, and alternative isolate identifications. GenBank accession numbers for sequences obtained in present study are shown in bold.
